

ADInstruments Corporate Overview

- ADInstruments was established in 1988. The company's core product is the PowerLab® data acquisition system, used with Chart™, Scope™ and LabTutor® software.
- Head office and manufacturing plant are located in Bella Vista, Sydney, Australia. Research and Development is based in Dunedin, New Zealand.
- Chairman of the ADInstruments Board, Michael Macknight, developed prototypes of the company's first data acquisition unit and software at the University of Otago in 1986.
- Michael Macknight's interest in life science was fostered by his father, ADInstruments Director and physiology academic, Professor Tony Macknight.
- The prototypes were further developed for distribution when Michael Macknight met electronics engineer Boris Schlensky. Together, Macknight and Schlensky founded the company.
- Chief Executive Officer Graham Milliken joined the company in 1989. In 1998 Milliken established the North American office, and has since returned to Sydney to oversee ADInstruments' worldwide operations.
- North American operations are based in Colorado Springs, Colorado. The company also has offices in Germany, United Kingdom, Japan, China, India and Chile.
- In Research, PowerLab data acquisition systems and Chart software enable users to record, display and analyze life science data quickly and efficiently while advancing scientific investigations.
- In Education, ADInstruments products are part of college and university life science curriculums. Customized hardware and software such as LabTutor make teaching and learning scientific principles interactive and easy.
- PowerLab systems are used in the world's best academic institutions, pharmaceutical and contract research laboratories, government organizations and a range of private companies.
- ADInstruments products are designed, manufactured and serviced under an ISO 9001:2000 quality management system and certified as meeting strict international standards.
